

Hitachi Transport System Europe (HTSE) is an international logistics service provider (3PL) that works together with its customers on suitable logistics solutions. Thanks to innovative and tailor-made solutions, HTSE offers a comprehensive range of services with worldwide coverage from its European business units (BU) in The Netherlands, Germany, United Kingdom, Spain, Italy and France.

For our European head office in Waardenburg (The Netherlands) we are looking for a:

Logistical Engineer (full time)

As a logistical engineer you are continuously searching for improvements within our logistical operations (processes, systems and tools) and make recommendations on efficiency and innovation. In this role you report to the General Manager and depending on the given tasks to a specific Business Unit Manager.

Working hours: 40 hrs/ week (full time)

Location: Waardenburg

Tasks and responsibilities

Project management

- As a project manager you are responsible for preparing, planning, coordinating, leading and implementing the execution of logistics projects. You draw up project plans in collaboration with the client and possibly other stakeholders.
- You then prepare projects by drawing up the assignment description, schedule and budgets. And you take care of the implementation to the organization in collaboration with your team.
- You advise the client on decisions and choices to be made within the project, ensure sufficient capacity from the IT departments and possibly other departments and/or suppliers. In addition, you coordinate the progress with the client, the IT manager and other stakeholders.
- Coordination with management with regard to prioritization and providing insight into the available change capacity to be able to start projects is also an important part of this position.

Networking

- Maintain good relations with the HTSE's business units and specific process responsible stakeholders.
- Exchange information about requirements, improvements and innovations of current and new to adopt procedures and systems.

Management information

- Provide customer specific reporting.
- Perform data analysis.
- Act as an advisor.

Improvements

- Advise on unifying procedures and methods within HTSE business units.
- Investigate possibilities for further improvement, development and innovation.
- Continuously look for efficiency and/or effectivity: find the balance between doing the right thing and doing the things right.
- Expand your knowledge and catch up/introduce an advanced technology like robotic solution, DX.

Requirements

- HBO working- and thinking level.
- Preferably a degree in Logistics, Supply Chain Management, Business Management or Industrial Engineering.
- 3 years of working experience in a similar job with a proven track record.
- Experience within an international operating company – working with different cultures.
- Strong verbal and written communication skills in Dutch and English.

- Strong problem solving skills.
- Team player.
- Proficient in the use of MS Office, Excel, Power Point, Access etc.
- Up to date on logistical (ERP) syst
- Residence in the Netherlands
